About Ecological Modeling

This team is focusing on developing a statistical model of the ecology in the greater DC metro area. The model assists in determining locations for solar panels.

There aren't a great deal of materials required for this project, but it is heavily software based. Notably, members of the team are located outside of the DC area, with the exception of field researchers located in the area. It is no surprise that the information is sharable in digital formats.

Microdroplet Formation

Summary from Wikipedia

Droplet-based microfluidics manipulate discrete volumes of fluids in immiscible phases with low Reynolds number and laminar flow regimes.[1][2] Interest in droplet-based microfluidics systems has been growing substantially in past decades.[3][4] Microdroplets offer the feasibility of handling miniature volumes (μl to fl) of fluids conveniently, provide better mixing, encapsulation, sorting, sensing and are suitable for high throughput experiments.[5][1] Two immiscible phases used for the droplet based systems are referred to as the continuous phase (medium in which droplets flow) and dispersed phase (the droplet phase).[6]

Droplet Based PCR

Polymerase chain reaction (PCR) has been a major endeavor since its inception to miniaturize the process. Early PCR endeavors focused on the construction of single-molecule PCR-on-a-chip device.[73] Early single molecule DNA replication, including what occurs in microdroplet or emulsion PCR, was more difficult than larger scale PCR so much higher concentrations of components were usually used.[74] However, fully optimized conditions have minimized this overload by insuring single molecules have an appropriate concentration of replication components distributed throughout the

van Dijke KC, Veldhuis G, Schroën K, Boom RM (2010-03-01). "Simultaneous formation of many droplets in a single microfluidic droplet formation unit". *AIChE Journal*. 56 (3): 833–836. doi:10.1002/aic.11990. ISSN 1547-5905.

PSIHESSION OVERVIEW

Last Month ▾

Psihesion Probability

(Over the next month)

Five people joined our network at the beginning of last month.

Initially psihesion decreased based on the new ideas of

being integrated into our group.

Psihesion began increasing roughly three weeks ago.

Certain beliefs prove to be significantly constructive to psihesion in our network:

Relativity

Scientific Thought

+43

Shortly thereafter, many other people will begin considering Asabiyah. Some of the people who recently adopted it will have second thoughts, but there is a high probability that they will continue to hold the belief.
