Social Discovery

- Find automatic entity analysis results
- Search via advanced field analysis (of nodes and edges in a graph)
- Search with free-text and state-of-the-art search engine techniques
- View initial results to gain high-level understandings of opportunities

Multiple systems, one search engine

- Service oriented back-end systems parse user interface requests
- Multiple database queries bring together advanced insights

Data Management: Neo4j, Elasticsearch, SQL, Hadoop, Spark, Kafka

TensorFlow, SciPy, NumPy

Python (Flask, Django), Java (Spring Boot)

JavaScript (Angular, React)

API:

User Interface:

Social Discovery

Find opportunities automatically

Development of programs that ensure a healthy and thriving population. People live fulfilling lives. Improvements to agriculture ensure that each person survives. Life is cherished.

Elasticsearch

Neo4j

Basic Discovery Search

API:

GET /profiles - Sample Python Flask REST call to list all profiles

```
{  
    "id": <uuid>,  
    "type": <integer>,  
    "names": {  
        "first_name": <string>,  
        "last_name": <string>,  
        "display_name": <string>,  
        # Other names  
    },  
    "data" :  
        # Includes attributes (or ID pointers) such as:  
        # "profiles", "roles", "projects", "sources", etc.  
}
```

Example simplified to show search on profile "name" attribute.
More elaborate queries may include additional attribute searching.

Neo4j:

Query profiles based on shortest path algorithm

```
MATCH (n) where n.name IN {names}  
WITH collect(n) as nodes  
UNWIND nodes as n  
UNWIND nodes as m  
WITH * WHERE id(n) < id(m)  
MATCH path = allShortestPaths( (n)-[*..4]-(m) )  
RETURN path
```

Elasticsearch:

Query rich-text data with keyword match of Neo4j attribute results

```
GET /_search  
{  
    "query": {  
        "terms": {  
            "profile.name": [ "sam", "samuel", "samantha" ]  
        }  
    }  
}
```

O Microdroplet Formation

Summary from Wikipedia

Droplet-based microfluidics manipulate discrete volumes of fluids in immiscible phases with low Reynolds number and laminar flow regimes.[1][2] Interest in droplet-based microfluidics systems has been growing substantially in past decades.[3][4] Microdroplets offer the feasibility of handling miniature volumes (μl to fL) of fluids conveniently, provide better mixing, encapsulation, sorting, sensing and are suitable for high throughput experiments.[5][1] Two immiscible phases used for the droplet based systems are referred to as the continuous phase (medium in which droplets flow) and dispersed phase (the droplet phase).[6]

Droplet Based PCR

Polymerase chain reaction (PCR) has been a vital tool in genomics and biological endeavors since its inception as it has greatly sped up production and analysis of DNA samples for a wide range of applications.[72] The technological advancement of microdroplet scale PCR has enabled the construction of single-molecule PCR-on-a-chip device.[73] Early single molecule DNA replication, including what occurs in microdroplet or emulsion PCR, was more difficult than larger scale PCR so much higher concentrations of components were usually used.[74] However, fully optimized conditions have minimized
