# ○ Microdroplet Formation

## Summary from Wikipedia

Droplet-based microfluidics manipulate discrete volumes of fluids in immiscible phases with low Reynolds number and laminar flow regimes.[1][2] Interest in droplet-based microfluidics systems has been growing substantially in past decades.[3][4] Microdroplets offer the feasibility of handling miniature volumes ( $\mu\text{l}$  to  $\text{fL}$ ) of fluids conveniently, provide better mixing, encapsulation, sorting, sensing and are suitable for high throughput experiments.[5][1] Two immiscible phases used for the droplet based systems are referred to as the continuous phase (medium in which droplets flow) and dispersed phase (the droplet phase).[6]

## Droplet Based PCR

Polymerase chain reaction (PCR) has been a vital tool in genomics and biological endeavors since its inception as it has greatly sped up production and analysis of DNA samples for a wide range of applications.[72] The technological advancement of microdroplet scale PCR has enabled the construction of single-molecule PCR-on-a-chip device.[73] Early single molecule DNA replication, including what occurs in microdroplet or emulsion PCR, was more difficult than larger scale PCR so much higher concentrations of components were usually used.[74] However, fully optimized conditions have minimized

## PSIHESSION OVERVIEW

Last Month ▾

Psihesion Probability

(Over the next month)

Five people joined our network at the beginning of last month.

Initially psihesion decreased based on the new ideas of

being integrated into our group.

Psihesion began increasing roughly three weeks ago.

Certain beliefs prove to be significantly constructive to psihesion in our network:

Relativity

Scientific Thought

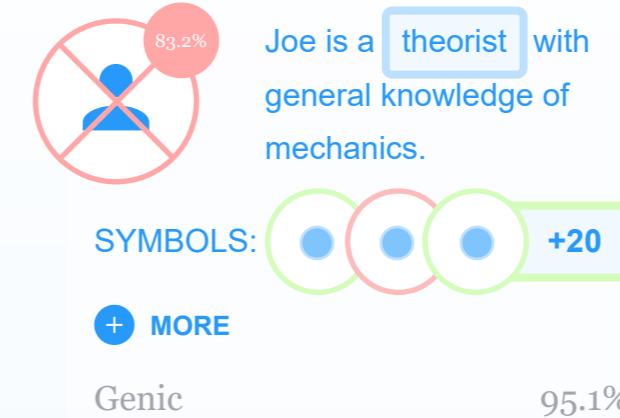

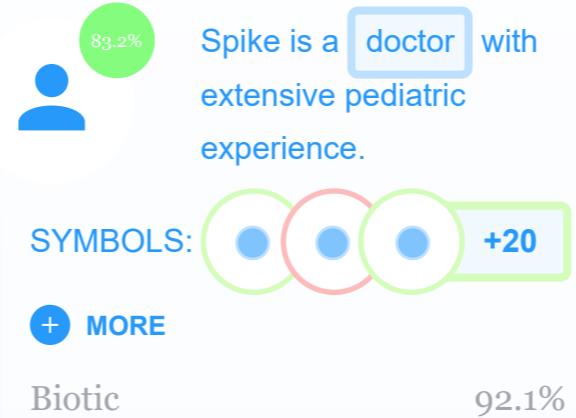

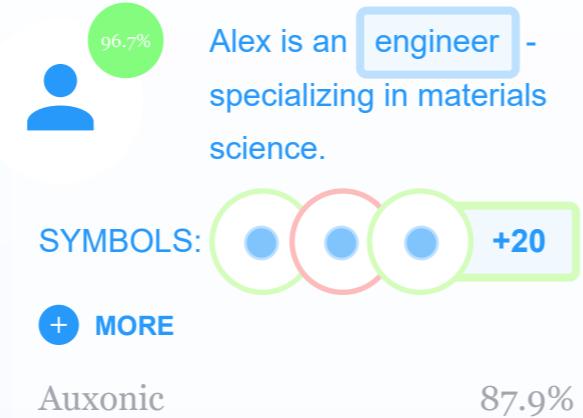

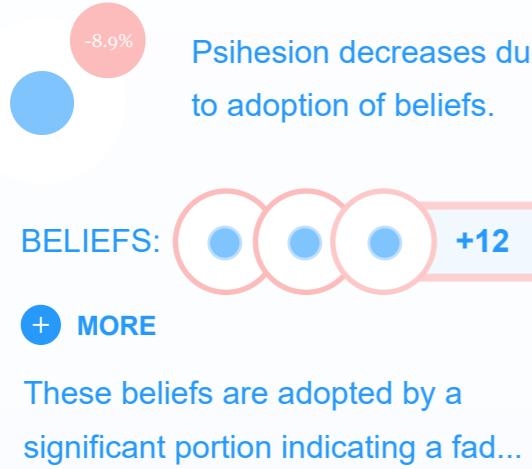

+43

Shortly thereafter, many other people will begin considering Asabiyah. Some of the people who recently adopted it will have second thoughts, but there is a high probability that they will continue to hold the belief.

Next Month ▾

## PSIHESION SIMULATION

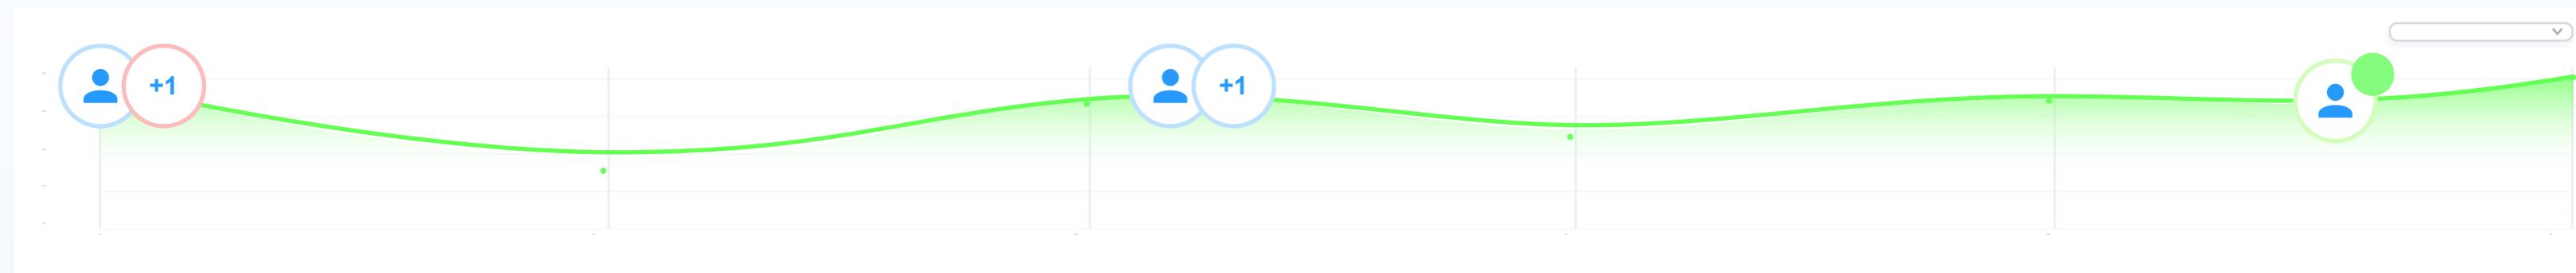

There are no more people or events added in this simulation.

## PSIHESION FORECAST

Next Week ▾

The social dynamics over the next quarter will change like this as long as the network does not increase or decrease its membership. We can simulate additional circumstances, like the addition or subtraction of members.

[SIMULATE](#)

Tomorrow, two people will join our group. While neither person particularly contributes to psihesion, their skillsets do increase psihesion concentration. [Diplomacy](#) [+52](#)

By Wednesday, two additional people will join our group. Their technical expertise as [biologists](#) improves our understanding and complements some of the interests we have in [natural sciences](#) and [biotics](#) : [Novelty Seeking](#) [+26](#)

One more person will likely join by the end of the week. They have greater than a 95% chance of increasing psihesion by at least 5%.

There are no more forecasted events for this time period.
